Work from Anywhere with Cloud Technology Solutions

These days, our definition of “the workplace” has greatly evolved from our parents’ definition. For them, Monday through Friday – even during the summers – Dad wasn’t home. He was “at the office”. He’d wear business clothing to work, then change into his casuals when he returned in the evenings. House and yard work was completed on the weekends, and you squeezed in recreation where you could.

Now, let’s have a look at what’s happening in our world: the cloud generation. The world is now your “office”. Fix a document while dining at a five-star restaurant, pull up a file on a business trip in Paris, approve a project while vacationing in Dubai.

It’s all yours now, anywhere you want it.

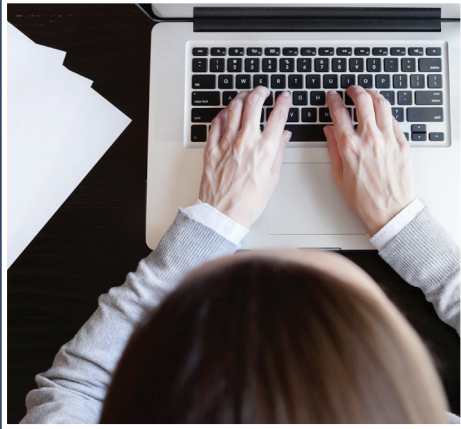

Cloud Computing Lets You Communicate, Collaborate, and Control.

In addition to working remotely from anywhere, cloud computing also allows you to stay in touch with not only your employees, but also your clients. Consider having the ability to drop a file into your cloud messaging program, and instantly your co-workers receive it and may present their immediate feedback.

//

The world is now your “office”. Fix a document while dining at a five-star restaurant, pull up a file on a business trip in Paris, approve a project while vacationing in Dubai.

//

You make the changes anywhere, then drop it right over to your client. That very moment, he reviews the file and sends back an enthusiastic approval. Well done.

This – is modern business. Again – the world is now your office. The very moment you have an Internet connection – no matter where you are on the planet – you're in "your office". This is now the way the world works most efficiently. Never again will you have to place that embarrassing call to work, requesting one of your co-workers venture into your office to email you a file. Instead, all your files are available the second you sign into your network, regardless of the computer you use.

This is the "office" of today, and even still, it continues to further evolve. It's time for your "office" to begin this journey, and DMS will make it happen. One phone call, and DMS will customize an entire system for your business to make this type of new work environment a complete reality.

Onsite Servers, Technology Licenses, System Updates – They All Go "Bye-Bye".

It's happened to all of us:

You're trying to work, and suddenly – a pop-up warning.

*"There is a more up to date version of this program.
Would you like to run the update installer now?"*

*"NO" --> *click!**

*"When would you like us to remind you about this
system update? In one hour? In one day? In one week?"*

DMS will customize
an entire system
for your business to
make this type of new
work environment a
complete reality.

With cloud technology solutions, those updates no longer involve you. All updates are handled on the back end, so never again will you be bothered by another of those irritating pop-ups.

Now, let's discuss one of the largest highlights: the cost. Have you priced business servers lately? Let us save you the trouble: the cost is exorbitant. Until recently, business owners have had to pay these astronomical amounts in order to get their businesses up and running.

Nowadays, no on-site server is necessary: everything updates directly to the cloud, and you simply pay the monthly service fee. Plus, with DMS, we can also keep up with every single one of your technology licenses on our end.

Quite simply put: when you get cloud technology solutions from DMS, you leave all technical aspects to us, while you spend all your time cultivating and growing your business – again, from anywhere in the world. Welcome to your new “office”.

Call DMS for Your Cloud Technology Solutions.

DMS is the best when it comes to cloud technology solutions. Everyone is ready to embrace “the world” as their office – in fact, many are choosing to do-away with the physical “office” area altogether, allowing all employees to work from home, and hold periodic meetings at a local coffeehouse or restaurant.

This is the way of business's future – join us in enjoying every productive moment of it.

“
All updates are handled on the back end, so never again will you be bothered by another of those irritating pop-ups.”
